

4D + Rf Micro Needle

High Intensity Focused Ultrasound (HIFU) directly delivers heat energy at temperature 60°-75°C to skin and subcutaneous tissue with non-invasive treatment, which stimulate and renew the skin's collagen and thus consequently improving the texture and reducing sagging of the skin. It literally achieves the results of a facelift or a body lifts without any invasive surgery or injections, moreover, an added bonus of this procedure is that there is no downtime. This technique can be applied to the face as well as the whole body, and also, it works equally well for people of all skin colors, in contrast to that of lasers and the intense pulse lights.

Advantage

1. There are two modes of 4D Ultrasound : fast mode or slow mode.
2. 4D Ultrasound can be used for 1 to 12 lines with a maximum energy area width of 11mm, and the corresponding parameters can be adjusted according to the size of the skin area, which make the operation time is greatly shortened , make the energy point effects on the skin is more uniform, and the curative effect is better.
3. Imported spare parts: Focused ultrasound transducer is imported from Japan, and the electric motor is imported from Switzerland. High quality machine comes from details.
4. The operation is simple and convenient, no need for consumables, greatly reducing treatment costs.
5. Instant and long-lasting result Instant result will be checked after first treatment. What's more, the treatment effect would get better and better along with the time goes by, the best result would be in two months after treatment, and this good result will last 2-3 years..
