

7D + 4D 2 in 1

The effect of HIFU is to lift and tighten the skin, improve facial contours, eliminate wrinkles, whiten and shape the body. The principle is to use the machine probe to emit high-energy focused ultrasound, which instantly penetrates the skin and acts on the epidermis, dermis, fat layer, and fascia layer to stimulate the contraction and regeneration of skin collagen, thereby achieving the effect of layering and anti-aging.

Advantage

1. One shot can hit up to 12 lines, and the maximum energy area width is 10mm. The corresponding parameters can be adjusted according to the size of the skin area. The operation time is shortened, the energy points of the skin are more uniform, and the curative effect is better.
2. Using the most advanced high-tech technology, two treatment heads are equipped according to the facial skin condition, which can precisely act on different skin depths, and the energy during treatment is slightly lower. Through the epidermis, 100% without any damage. At the same time, the depth of the skin applied by the treatment head is in line with the set value, ensuring that the customer is pain-free and comfortable.
3. It has stimulation on the fat layer and fascia layer (SMAS) as well as the effect on dermal collagen and collagen fibers, and the therapeutic effect is far better than .
4. Simple and convenient operation. No consumables are required, which greatly saves the cost of treatment.
5. Immediately after treatment, the effect of tightening and shaping can be seen. One treatment can last for at least 18-24 months, and the skin age can be negatively increased once a year.
6. Apply makeup immediately after treatment without affecting normal life and work.
