

## HIFEM Technology

High-Intensity Focused Electromagnetic (HIFEM) technology to induce supramaximal contractions, something that cannot be achieved at the gym through voluntary exercise. The muscle tissue then adapts by remodelling its inner structure resulting in building muscle and burning fat.

### Advantages:

- 10.4 true color touch screen, easy operation
- Germany import thyristor, high efficiency
- 4 paddles optional, suitable for full body treatments
- 16% average increase in muscle gain, 19% on average fat reduction
- Air cooling system, continuous working without failure. No need water cooling
- 30 minutes treatments = 20,000 sit-ups, instant results
- Three working modes, protocol 1, protocol 2 and protocol 3
- 150HZ high frequency, stronger muscle stimulation
- Combined with Emsella chair, best choice for men and women
- Non-invasive, Non surgical, no downtime, no sweat, and pain free treatment
