

# Hifem Beauty Muscle Machine

Through the use of HI-EMT (high-energy focused electromagnetic wave) technology for muscle stretching and contraction, extreme training, and deep remodeling of the internal structure of the muscle, it induces continuous muscle expansion and contraction, realizes high-frequency extreme training, and achieves the growth of myofibrils ( muscle growth) and produces new collagen chains and muscle fibers (muscle hyperplasia), which trains and increases muscle density and volume. HI-EMT 100% extreme muscle contraction technology will cause a large amount of fat to be decomposed, fatty acids flow out from the decomposed triglycerides, and accumulate in a large amount in fat cells. If the fatty acid is too high, the fat cells will undergo apoptosis and be excreted by the body within a few weeks.

## Advantage

- 1. Different muscle training modes can be set
- 2. The two handles independently control the energy output, and the handles support independent and synchronous work; the treatment parameters of the two handles can be adjusted independently; two people can operate at the same time, suitable for men and women
- 3. You can burn fat and increase muscle while lying down, and reshape the beauty of lines
- 4. Save time and effort, just lie flat for 30 minutes = 30,000 muscle contractions (equivalent to 30,000 crunches/squats)
- 5. Simple operation
- 6. During the treatment, there is only the feeling of muscle contraction, no pain or sweating, and no side effects on the body
- 7. Only 4 courses of treatment are needed within two weeks, and every half hour, you can see the effect of reshaping the lines of the treatment course
- 8. The water circulation cooling system prevents the treatment head from generating high temperature and greatly improves the stability of energy output
