

Micro needling RF Technology

Micro-needling (also known as collagen induction therapy) is a minimally invasive treatment that has been used for decades to rejuvenate the skin. A device with fine needles or pins creates tiny punctures in the top layer of the skin, which triggers the body to create new collagen and elastin.

Advantages:

- Micro needle RF technology for face and body treatments
- Needles pins: 10 pins, 25 pins, 64 pins, nano heads
- Full body treatments, not only the face
- Micro needle delivers RF directly to target area and reforms collagen and elastin effectively
- Cold hammer optional to cool the skin
- Special handle option for ance treatments
- Insulated treatment heads, better than non-insulated heads
- Increases skin collagen elasticity, improves wrinkles.
- RF direct penetration to the target area, in order to obtain sufficient effect.
- Non-invasive, Non surgical, no downtime, and pain free treatment
