

## Ultra + 4D HIFU

High Intensity Focused Ultrasound (HIFU) directly delivers heat energy to skin and subcutaneous tissue that can stimulate and renew the skin's collagen and thus consequently improving the texture and reducing sagging of the skin. It literally achieves the results of a facelift or a body lift without any invasive surgery or injections, moreover, an added bonus of this procedure is that there is no down time. and also, it works equally well for people of all skin colors, in contrast to that of lasers and the intense pulse lights. It's heating directly to deeper tissue, in order to lift the skin. It is performed in the office with only ultrasound gel applied to the skin. An ultrasound screen image allows the physician to visualize the level of treatment before energy is applied to the targeted tissue.

## Advantage

1. It has different working heads for different operational areas:--- 3.0mm is for the face dermis layer.--- 4.5mm is for the face SMAS layer
2. Instead of the traditional surgical face lift with a non-invasive technique.
3. Tighten sagging skin, improve sagging and other signs of aging.
4. With a special transmitter, transmission from the skin surface conduction of high-energy focused ultrasound to the SMAS layer.
5. Non-invasive, no time to rest after treatment, ultrasound without injections, no trace wrinkle skin rejuvenation.
6. Fit any age, both men and women.
7. It's totally non-invasive and safe.
8. The effect will be shown after operation, the best effect will be seen after two months. It can be lasted for 2-3 years.
9. No anesthesia or epidermal anesthesia, no pain, treatment more comfortable.

## 2 IN 1 HIFU MACHINE

More effective handling of sensitive areas
