

Ultra + Vmax

Replace traditional surgical face lifts with non-invasive techniques. Tightens sagging skin, improving sagging and other signs of aging. Through a special transmitter, high-energy focused ultrasound is transmitted from the skin surface to the SMAS layer. SMAS contraction: collagen remodeling, elastic fibers shrink. In a short period of time, the skin layer generates 65-70 degrees above the specified target multiple temperature or above sound waves to focus on high energy, forming a "heat curing" area, so that the focused cells are cured and ablated, and the fascia is rapidly improved, achieving the effect of cosmetic wrinkle removal. Non-invasive, no rest after surgery, no ultrasound injection, no surgery, no trace of wrinkle skin rejuvenation. Suitable for any age, unisex. The skin is equipped with a variety of energy transmitters at different levels, which transmit high-energy focused ultrasound to each layer of the skin..

Applications

- 1) Removing wrinkles on around forehead, eyes, mouth, etc
- 2) Lifting and tightening both cheeks skin
- 3) Improving skin elasticity and shaping contour
- 4) Improving jaw line, reducing "marionette lines"
- 5) Tightening the skin tissue on forehead, lifting the eyebrows lines
- 6) Improving skin complexion, making the skin delicate and bright
- 7) Matching with injecting beauty like hyaluronic acid, collagen, to resolve more aging problem
- 8) Removing neck wrinkles, protecting neck aging.
