

## Vertical Ultra + Liposonix

HIFU 2 in 1, it is a single row fixed point + custom point technology. The Ultra is a more authoritative and higher-end anti-aging system instrument after the (Thermage), which replaces the various functions of lifting firming, wrinkle removal, and tightening of the skin. Liposonic converts focused ultrasound into 65~70 degree heat energy to crush and dissolve fat cells. The required fat cells are quickly crushed and dissolved in large particles of fat cells, reducing the amount of fat while stimulating the contraction and proliferation of collagen, quickly filling the gaps that appear after the ablation of fat, and the skin surface after treatment is thin and not wrinkled.

## Advantage

1. A variety of treatment heads, according to different skin depths, choose different probes, which can act on various parts, such as the face, neck, chest, arms (butterfly sleeves), buttocks, legs, abdomen, etc.
2. Ultra can adjust the length of the point arbitrarily, which greatly shortens the operation time, makes the energy points on the skin more uniform and has better curative effect.
3. Lifting, tightening and shaping effects can be seen immediately after the course of treatment. A course of treatment can be maintained for at least 18-24 months, and once a year can achieve negative skin age growth.
4. The whole treatment is comfortable, no need to wear shapewear, no downtime, and does not affect normal life and work
5. Intelligent control, touch operation, visual interface, easy to learn, safe and convenient.
6. liposonic adopts circular custom contour output system. The treatment head emits 24 energy lines in the treatment area, 24 energy lines and 576 focal points at a time.
7. There is no injection, no wound, no drug and no anesthesia during the whole treatment process.
8. Liposonic can permanently destroy subcutaneous fat, directly reduce fat mass, the destroyed fat cells will never return, and can maintain a slim and good figure for a long time.
